

# **Populous™ Addendum**

Please read the following notes before playing Populous.

If your joystick doesn't seem to work and you have more than one joystick port, restart the game with the joystick connected to the other port.

## **Cautions on Using Two Player Mode**

Do not connect in 9600 baud if you are playing Populous against an opponent on an Atari ST or Commodore Amiga.

Saved landscapes cannot be used in Two Player mode.

To disconnect your modem and play the current game against the computer instead of your modem opponent, select One Player on the Game Setup menu. The computer will send a message to your opponent that you are going off line. Next, select Two Players to bring up the Initialise Communications requester. Send the necessary modem commands to disconnect your modem, and then select Canel. Now select Human vs PC in the Game Setup menu, and select OK.
